Introduction

This chapter contains details about the test cases applicable to the Acquirer Credit and Debit business profile during individual application testing and validation of a customer's acquirer Dual Message authorization application.

Separate test cases are provided for magnetic stripe-based operations and for upgrading to integrated circuit card (ICC)-based operations. Depending on the nature of a customer's proposed operations, test cases must be selected as follows:

- For customers undergoing testing and validation for magnetic stripe-based operations only, the test cases described in the Test Cases—Magnetic Stripe-based Operations section must be conducted.
- For customers undergoing testing and validation for both magnetic stripe-based operations and ICC-based operations, the test cases described in both the Test Cases—Magnetic Stripe-based Operations section and in the Test Cases—ICC-based Operations section must be conducted.
- For customers that have been validated for magnetic stripe-based operations and are now undergoing upgrade testing and validation to additionally conduct ICC-based operations, only those test cases provided in the Test Cases—ICC-based Operations section need be conducted.

Within the Test Cases—Magnetic Stripe-based Operations and the Test Cases—ICC-based Operations sections, test cases are described for both contact operations and contactless operations. Depending on the nature of a customer's proposed operations, test cases must be selected as follows:

- Customers undergoing testing and validation only for contact operations should conduct those test cases described for contact operations.
- Customers undergoing testing and validation for both contact operations and contactless operations must conduct the test cases described for both contact operations and contactless operations.
- Customers that have been validated for contact operations and are now undergoing upgrade testing and validation to additionally conduct contactless operations, should conduct those test cases described for contactless operations.

NOTE:

If customers intend to support contactless magnetic stripe-based operations, they must have been validated previously for contact magnetic stripe-based operations. If customers intend to support contactless ICC-based operations, they must have been validated previously for upgrade to contact ICC-based operations.

The following manuals in the Testing Reference Information Center (TRIC) document set provide references to these test cases, indicating when they should be conducted:

- Offline Validation
- Online Validation

TRIC Table Notations

This table defines notations that appear in tables throughout this chapter.

TRIC Table Notations

Notation	Definition
M	Indicates a Mandatory business transaction.
C	Indicates a Conditional business transaction.
V	Where it appears in a DE 52 column, indicates a Valid PIN value. Where it appears in an RC column, indicates any valid response or any specified response provided.
IV	Where it appears in a DE 52 column, indicates an Invalid PIN value.
␣	Indicates a blank space when used in DE 48, subelement 71 fourth position.
n/a	Indicates Not Applicable.
x	For addenda messages, indicates No Information.
* (Single asterisk)	Where it appears in a DE column, indicates a 1 character field of customer choice.

Notation	Definition
** (Double asterisk)	Where it appears in a DE column, indicates a 2 character field of customer choice.
1	Where it appears in a SIM or MTF column, indicates testing is recommended for that environment.
0	Where it appears in a SIM or MTF column, indicates testing is available for that environment.
—	Where it appears in a column in an integrated Dual and Single Message testing table, indicates that customers do not have to send, or will not receive, any messages normally indicated in that column.

Test Cases—Magnetic Stripe-based Operations

The test cases listed in this section are applicable to magnetic stripe-based operations only. Both contact magnetic stripe-based operations and contactless magnetic stripe-based operations are addressed. Select the appropriate business transactions from the following tables and conduct the associated test cases.

Base Testing

The following test cases in this section test whether a customer's acquirer Dual Message application can send correctly formatted Authorization Requests and process the resulting Authorization Responses when presented with the required basic functions.

NOTE: Acquirers may optionally submit ATM transactions with online PIN as CAT level 1 or CAT level 0.

Table 0400001—Acquirer Credit and Debit—MSR Base—All Business Transactions (ATM)—Authorization Requests and Reversals

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted Authorization Requests and Reversals for different ATM business transactions containing various combinations of PAN entry mode,

transaction type, cardholder activated terminal level, and cardholder verification method and process the resulting approved Authorization Responses.

Table 0400426—Acquirer Credit and Debit—MSR Product and Services—Mastercard Electronic Card—Authorization Requests

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted Authorization Request messages indicating Mastercard Electronic Acceptance Indicator and process the resulting Authorization Request Response.

The Mastercard Electronic Acceptance Indicator indicates if a transaction is a Mastercard Electronic transaction and designates if the acquirer, merchant, or both, participate in the Mastercard Electronic program.

Mastercard Electronic transactions may only be conducted in countries approved for participation. The Dual Message Authorization System validates country participation using the POS country code in Authorization Request messages. Brazil allows all PAN entry modes. Europe requires issuer authenticated SecureCode for electronic commerce transactions.

NOTE: Per announcement AN 1343Decommissioning of Mastercard Electronic plans to phase out the Mastercard Electronic brand. Effective 18 October 2019 acquirers must no longer acquire MasterCard Electronic transactions.

Table 0400471—Acquirer Credit and Debit—MSR Product and Services—Real-time Substantiation (U.S. Region)—Authorization and Reversal Requests

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted Real-time Substantiation Authorization and Reversal Requests, and process the resulting Authorization Responses.

This section addresses real-time substantiation at the Point-of-Service (POS) for U.S. healthcare qualified expenses incurred on Flexible Spending Account (FSA) and Healthcare Reimbursement Arrangement (HRA) cards when used at a merchant with a qualifying Inventory Information Approval System (IIAS) or at a 90 percent merchant.

NOTE: Test cases assume merchant is SIGIS-compliant and terminal verified the purchased items against an IIAS.

The amount type 11 is included in amount type 10.									

Table 0400491—Acquirer Credit and Debit—MSR Product and Services—Account Level Management (U.S. Region)—Authorization Requests

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted Authorization Requests, and process the resulting Authorization Responses that contain Account Level Management information. The Account Level Management information consists of the account category code in the sixth position of DE 39 approval response and, if applicable, the graduated product code in DE 63, SF 1.

NOTE: U.S. acquirers are mandated to support Account Level Management for Mastercard Enhanced Value (EV), Mastercard Product Graduation (PG), Mastercard High Value (HV) and Mastercard Spend Shortfall. Debit Mastercard supports Mastercard Product Graduation, but not Mastercard Enhanced Value or Mastercard High Value. Test cases 1-6 are for consumer cards, 7-9 are for Mastercard World and World Elite Mastercard Spend Shortfall cards, and 10-20 are for Small Business Spend Processing.

Acquirers must be prepared to use the account category code in approved responses when the account range, as found on the IPM MPE, indicates participation in Account Level Management.

Table 0400601—Acquirer Credit and Debit—MSR Product and Services—Contactless Magnetic Stripe (All Business Transactions)—Authorization Requests

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted Authorization Requests for various contactless magnetic stripe business transactions and process the resulting Authorization Responses.

The tests in this table require that the tester use test cards in the TIP Test Tools Subset 6. For information about obtaining Subset 6, please see M/Chip Qualified Test Tools (link to that document, http://my.mastercard.com/gto/service_mgmt/cust_service_mgmt/Manuals_MP/ENG/MCQ/MCQ_Manual.pdf)

NOTE: For all tests in this table, DE 61, SF 11 (POS Card Data Terminal Input Capability Indicator) must contain the following information, based on the acquirer's terminal capabilities:

- For terminals supporting both contactless M/Chip and contactless Magnetic Stripe transactions: 3 (Contactless M/Chip [Proximity Chip])
- For terminals supporting only contactless Magnetic Stripe transactions: 4 (Contactless Magnetic Stripe [Proximity Chip] only)

NOTE: CVM Limit Amounts are found in the Chargeback Guide.

		Contactless magnetic stripe business transaction. Card is an M/Chip contactless card. Service code = 201. Customer must provide both transaction receipt and terminal display details. 0100: DE 4 (Amount, Transaction) must be 000000010033 to obtain appropriate data in response message. 0100 message must include Device Type = Card DE 48, SE 23 = 00, if Acquirer supports transmittal of Device Type values. PAN Mapping File Information (DE 48, SE 33) included in 0110 and in 0410. This test case must not be executed by Contactless M/Chip acquirers.									

Table 0400603—Acquirer Credit and Debit—MSR Product and Services—Contactless Magnetic Stripe Mobile (Technical Conditions)—Authorization Requests

The following test cases will test whether the POS terminals deployed are able to correctly process Mastercard contactless Mobile magnetic stripe cards that have specific values set in the data contained on the cards.

NOTE: These test cases are included to satisfy the Terminal Integration Process (TIP), as well as Network Interface Validation (NIV). All test cases must be repeated for each different terminal type, or manufacturers brand of terminal type that customers intend to deploy. For example, they must be repeated for each of manufacturer A POS terminal, manufacturer B POS terminal, manufacturer A CAT level 1 terminal, manufacturer B CAT level 1 terminal, etc. The terminal being tested must have been approved previously (hardware/software/firmware) by Mastercard.

NOTE: For all tests in this table, DE 61, SF 11 (POS Card Data Terminal Input Capability Indicator) must contain the following information, based on the acquirer's terminal capabilities:

- For terminals supporting both contactless M/Chip and contactless Magnetic Stripe transactions: 3 (Contactless M/Chip [Proximity Chip])
- For terminals supporting only contactless Magnetic Stripe transactions: 4 (Contactless Magnetic Stripe [Proximity Chip] only)

NOTE: The tests in this table require that the tester use test cards in the NIV Test Tools Subset 6. For information about obtaining Subset 6, please see M/Chip Qualified Test Tools.

NOTE: CVM Limit Amounts are found in the Chargeback Guide.

Table 0400603—Acquirer Credit and Debit—MSR Product and Services—Contactless Magnetic Stripe Mobile (Technical Conditions)—Authorization Requests

Case ID	MTI	Test Case Ref No	SIM	MTF	Business Transaction	DE 3_1	DE 22_1	DE 61_10	DE 52	Card Id	RC
1	0100	040060300001	1	N/A	MSR CONTACTLESS BUSINESS TRANSACTION OF CUSTOMER CHOICE	**	91	*	*	MCC_371A	00
		The objective of this test case is to ensure that a terminal not supporting Mastercard PayPass version 3 correctly completes a transaction with a Mobile device. The transaction must be run by Acquirers whose terminal does not support Mastercard PayPass version 3. Amount of transaction must be below the Contactless Transaction limit.									

Case ID	MTI	Test Case Ref No	SIM	MTF	Business Transaction	DE 3_1	DE 22_1	DE 61_10	DE 52	Card Id	RC
2	0100	040060300002	1	N/A	MSR CONTACTLESS BUSINESS TRANSACTION OF CUSTOMER CHOICE	**	91	*	*	MCC_371A	00
		The objective of this test case is to ensure that a terminal supporting Mastercard PayPass version 3 correctly completes a transaction with a Mobile device not requesting On-Device cardholder verification below the CVM Required Limit. This transaction must be run by Acquirers whose terminal supports Mastercard PayPass v3 and is configured with a CVM Required Limit greater than 0. Amount of transaction must be below the Mastercard CVM Required Limit.									
3	0100	040060300003	1	N/A	MSR CONTACTLESS BUSINESS TRANSACTION OF CUSTOMER CHOICE	**	91	*		MCC_371A MCC_371B	00
		The objective of this test case is to ensure that a terminal correctly manages supporting Mastercard PayPass version 3 correctly, completes a transaction with a Mobile device requesting On-Device cardholder verification and successfully completes a transaction with a Mobile device indicating a "PIN verification successfully". This transaction must be run by Acquirers whose terminal supports Mastercard PayPass v3 and is configured with a CVM Required Limit smaller than the Contactless Transaction Limit. Amount of transaction must be above the Mastercard CVM Required limit but below the Contactless Transaction Limit. The acquirer must first execute a transaction as described above using MCC_371A. The terminal then displays message stating "Please see phone" or similar message. Then the acquirer must tap MCC_371B on the terminal and re-enter the same transaction if prompted for it. The 0100 message will be generated after the tap with MCC_371B. This must be done together and in this order.

4	0100	040060300004	1	N/A	MSR CONTACTLESS BUSINESS TRANSACTION OF CUSTOMER CHOICE	**	91	*		MCC_371A	00
		The objective of this test case is to ensure that a terminal supporting Mastercard PayPass version 3 correctly completes a transaction with a Mobile device not requesting On-Device cardholder verification. This transaction must be run by Acquirers whose terminal supports Mastercard PayPass v3, is configured with a CVM Required Limit smaller than the Contactless Transaction Limit and does not support On-device Cardholder Verification. Amount of transaction must be above the CVM Required Limit but below the Contactless Transaction Limit.									
5	0100	040060300005	1	N/A	MSR CONTACTLESS BUSINESS TRANSACTION OF CUSTOMER CHOICE	**	91	*		MCC_371B	00
		The objective of this test case is to ensure that a terminal supporting Mastercard PayPass version 3 correctly completes a transaction with a Mobile device indicating PIN verification successful. This transaction must be run by Acquirers whose terminal supports Mastercard PayPass v3 and is configured with a CVM Required Limit equal to the Contactless Transaction Limit. Amount of transaction must be below the Contactless Transaction Limit.

Full reversal request to deactivate account due to the inability to forward response to merchant terminal or timeout waiting for a response.									

Table 0400614—Acquirer Credit and Debit—MSR Product and Services—Private Label Non-Financial Service—Authorization Requests

The following test case will test whether an acquirer's Dual Message authorization application can send correctly formatted Authorization Requests to support the Private Label Non-Financial Service and process the resulting Authorization Response value of 05 in DE 39.

The Private Label Non-Financial Service provides purchase point-of-sale information to manufacturers of luxury goods for use in various applications, such as warranty registration or inventory forecasting.

Acquirers supporting merchants participating in the MasterCard Private Label Non-Financial Service should be aware that Authorization Request/0100 transactions submitted with product code PVA (Private Label A) will be routed to and declined by Stand-In processing with DE 39 (Response Code), value 05 (Do Not Honor). Acquirers should pass the decline response to the merchant and take no further action.

Table 0400614—Acquirer Credit and Debit—MSR Product and Services—Private Label Non-Financial Service—Authorization Requests

		0110: DE 39 = 05 (Do not honor)									

Table 0400620—Acquirer Credit and Debit—MSR Product and Services—Corporate Fleet Cards—Authorization Requests

Mastercard BINs identified as Corporate Fleet Card trigger prompting at the merchant terminal and the request of fleet card information such as ID, driver, or vehicle number.

- Within BIN ranges 553231 to 553380, 556083 to 556099, 556100 to 556599, and 556700 to 556999.
- For these card acceptor business codes (MCCs) only: 4468, 5499, 5541, 5542, 5983.

Usage of MCC 5542 requires CAT level 2 code.

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted Authorization Request messages containing fleet card information and can receive Authorization Request Response messages containing a decline response code and additional response information in DE 44 (Additional Response Data) when there is a problem with the provided fleet card information.

Table 0400625—Acquirer Credit and Debit—MSR Product and Services—Automated Fuel Dispenser—Authorization Requests, Advices, and Reversal

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted Authorization Requests and related Authorization Advice message for Automated Fuel Dispenser transactions.

First, customers must send the correctly formatted Authorization Request on which the Authorization Advice is based.

Second, customers must send correctly formatted Authorization Advice for the completed amount of the transaction.

NOTE: Global acquirers use Reversal Request/0400 for an AFD zero amount completion whereas Europe acquirers may use Authorization Advice/0120 to inform issuers of an AFD zero amount completion.

Table 0400803—Acquirer Credit and Debit—MSR Product and Services—CVC 2—Authorization Requests

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted Authorization Requests, and process the resulting Authorization Responses under conditions which are specific to additional features available. The CVC 2 test cases verify that an acquirer can correctly forward the CVC 2 value from the signature panel of the card in DE 48, SE 92 of the authorization message. Use of the CVC 2 can be beneficial for acquirers, especially in non face-to-face transactions.

NOTE: The presence of CVC 2 and the CVC 2 response codes tested do not represent the full range possible.

		Digital Secure Remote Payment electronic commerce subsequent partial shipment or recurring payment transaction. 0100: DE 22, SF 1 = 81; DE 48, SE 42 = 247; DE 48, SE 43 not present; DE 61, SF 3 = 3 (Terminal not used).									

Table 0400833—Acquirer Credit and Debit—MSR Product and Services—MDES Tokens in DSRP, SecureCode, and Masterpass by Mastercard—Authorization Requests

The following test cases will test whether an acquirer's Dual Message authorization application can submit properly formatted MDES token transactions for Digital Secure Remote Payment (DSRP), SecureCode, and Masterpass by MasterCard in Authorization Requests and process the resulting Authorization Responses.

Acquirers may also test submitting an incorrect Security Level Indicator (SLI) value for which Mastercard corrects the value and provides DE 48, SE 42 subfields 1-3 containing corrected value, original value, and correction reason in Authorization Response.

Test Cases—ICC-based Operations

The test cases in this section are applicable when upgrading to ICC-based operations. Both contact ICC-based operations and contactless ICC-based operations are addressed. Select the appropriate business transactions from the following tables and conduct the associated test cases.

NOTE:

The transaction amounts customers use must be above the floor limit to cause the transaction to go online, as required in the test cases (transaction amounts below the floor limit will be processed offline).

Base Testing

The following test cases will test whether a customer's acquirer Dual Message authorization application can send correctly formatted Authorization Requests and process the resulting Authorization Responses when presented with the required basic functionalities.

NOTE:

Acquirers may optionally submit ATM transactions with online PIN as CAT level 1 or CAT level 0.

Table 0450001—Acquirer Credit and Debit—ICC Base—All Business Transactions (ATM)—Authorization Requests and Reversals

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted Authorization Requests and Reversals for different ATM business transactions containing various combinations of PAN entry mode, transaction type, cardholder activated terminal level, and cardholder verification method and process the resulting approved Authorization Responses.

		0100/0400: Authorization / reversal request meets the authorization Chip-specific general acceptance criteria. Full reversal because of customer cancellation.									

Table 0450011—Acquirer Credit and Debit—ICC Base—Technical Conditions—Authorization Requests

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted Authorization Requests and process the resulting Authorization Responses under the less common, but valid, general conditions surrounding the Authorization System.

These test cases must be executed by all acquirers using a Business Transaction that they support. The Acquirer may choose any business transaction that they support to execute these test cases. Therefore, Data Element fields marked with an asterisk (*) should be the correct ones for the transaction that the customer chooses to run for the test.

The tests in this table require that the tester use test cards in the NIV Test Tools Subset 3. For information about obtaining Subset 3, please see M/Chip Qualified Test Tools (link to that document, http://my.mastercard.com/gto/service_mgmt/cust_service_mgmt/Manuals_MP/ENG/MCQ/MCQ_Manual.pdf).

Table 0450011—Acquirer Credit and Debit—ICC Base—Technical Conditions—Authorization Requests

Case ID	MTI	Test Case Ref No	SIM	MTF	Business Transaction	DE 3_1	DE 22_1	DE 61_10	DE 52	Card Id	RC
1	0100	045001100001	1	N/A	ICC ATM OR CP BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE	**	05	*	*	DMC_111-112 MCC_111-112 MSI_111-112	00
		Authorization request meets the authorization Chip-specific general acceptance criteria plus the following: DE 23 (Card Sequence Number) must be "001" (card 111) and "002" (card 112) NOTE: Acquirers should execute this test case twice; once using card 111 and again using card 112 to validate that the acquirer is obtaining DE 23 value from the card itself.									
2	0100	045001100002	1	N/A	ICC ATM OR CP BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE	**	05	*	*	DMC_115 MCC_115 MSI_115	00
		Authorization request meets the authorization Chip-specific general acceptance criteria. Acquirer must support approved authorization response with no DE 55 (ICC System Related Data) after full grade request.									

Case ID	MTI	Test Case Ref No	SIM	MTF	Business Transaction	DE 3_1	DE 22_1	DE 61_10	DE 52	Card Id	RC

		Fallback to magnetic stripe on hybrid cards (DE 022 = 80X). Transaction contains correctly formatted magnetic stripe data. DE 61, SF 11 (POS Card Data Terminal Input Capability indicator) must be 5 (Terminal supports EMV contact chip input and magnetic stripe input) or 8 (Terminal supports EMV contact chip input, magnetic stripe input and key entry input). This test must be executed by Acquirers in locations where Chip Fallback to Magnetic Stripe is supported.									
4	0100	045001100004	1	N/A	ICC FALLBACK TO VOICE AUTHORIZATION POS BUSINESS TRANSACTION OF CUSTOMER CHOICE SIGNATURE	**	79	0		DMC_118 MCC_118 MSI_118	00
		Fallback to voice authorization on hybrid cards (DE 022 = 79X). Transaction contains PAN and expiry date from magnetic stripe. DE 61, SF 11 (POS Card Data Terminal Input Capability indicator) must be 5 (Terminal supports EMV contact chip input and magnetic stripe input) or 8 (Terminal supports EMV contact chip input, magnetic stripe input and key entry input). This test must be executed by Acquirers in locations where Chip Fallback to Magnetic Stripe is supported.									

Products and Services

The following test cases in this section test whether a customer's acquirer Dual Message authorization application can send correctly formatted Authorization Requests and process the resulting Authorization Responses when presented under conditions that are specific to all additional features available.

Table 0450151—Acquirer Credit and Debit—ICC Product and Services—Contactless M/Chip (All Business Transactions)—Authorization Requests

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted contactless chip Authorization Requests for various business transactions and process the resulting Authorization Responses.

The tests in this table require that the tester use test cards in the NIV Test Tools Subset 7. For information about obtaining Subset 7, please see M/Chip Qualified Test Tools (link to that document, http://my.mastercard.com/gto/service_mgmt/cust_service_mgmt/Manuals_MP/ENG/MCQ/MCQ_Manual.pdf).

NOTE: CVM Limit Amounts are found in the Chargeback Guide.

Table 0450311—Acquirer Credit and Debit—ICC Product and Services—PIN Management Service—Authorization Requests and Reversals

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted PIN Management Authorization Requests and Reversals and process the resulting Authorization Response messages. All PIN Management test cases are required for acquirers supporting M/Chip[™] PIN Management.

PIN Management Authorization M/Chip-specific general acceptance criteria:

Unless otherwise specified in the comments field of the test case, the following conditions must be fulfilled with M/Chip 0100 authorization request messages:

- DE 3 (Processing Code) SF 1 (Cardholder Transaction Type Code) must be 91 for PIN Unblock or 92 for PIN Change.
- DE 18 (Merchant Type) must be 6011.
- DE 22 (POS Entry Mode) SF 1 (POS Terminal Entry Mode) must be 05 (PAN auto-entry via M/Chip).
- DE 22 (POS Entry Mode) SF 2 (POS Terminal PIN Entry Mode) must be 1 (Terminal has PIN entry capability).
- DE 52 (PIN Data) must be present.
- DE 55 (ICC System-related Data) is present, the Authorization Request Cryptogram (ARQC) must be successfully validated by the simulator.
- All mandatory tags, including 9F34 (CVM Results), must be present in DE 55.
- DE 61 (POS Data) SF 4 (POS Cardholder Presence) must be 0 (Cardholder present).
- DE 61 (POS Data) SF 11 (POS Card Data Terminal Input Capability Indicator) must be 5 (EMV specification [compatible M/Chip reader] and magnetic stripe reader) or 9 (EMV specification [compatible M/Chip reader] only).
- For PIN Change transactions, DE 125 (New PIN Data) must be present and contain the new PIN Code encrypted with the same method as DE 52 (PIN Data).

The tests in this table require that the tester use test cards in the NIV Test Tools Subset 5. For information about obtaining Subset 5, please see M/Chip Qualified Test Tools.

This table includes successful requests, declined results, technical conditions, and reversals.

Table 0450550—Acquirer Credit and Debit—ICC Product and Services—Colombia Domestic Processing—Authorization Requests

The following test cases will test whether an acquirer Dual Message authorization application can send various types of Colombia domestic transactions containing applicable data in correctly formatted Authorization Requests, Advice, and Reversal messages and receive the resulting Authorization Responses. Tip and tax values may be any desired amount. DE48 sub95, DE112 SE010 and 011 are required for MC Credit products and are optional for MC Debit. DE124 is required for all POS domestic messages.

Table 0450646—Acquirer Credit and Debit—ICC Product and Services—Automated Fuel Dispenser—Authorization Requests, Advices and Reversals

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted pre-Authorization Requests and related Authorization Advice message for Automated Fuel Dispenser transactions.

First, customers must send the correctly formatted pre-Authorization Request on which the Authorization Advice is based.

Second, customers must send correctly formatted Authorization Advice for the completed amount of the transaction.

NOTE: Global acquirers use Reversal Request/0400 for an AFD zero amount completion whereas Europe acquirers may use Authorization Advice/0120 to inform issuers of an AFD zero amount completion.

Introduction

This section contains details about the test cases applicable to the Acquirer ATM Credit and Debit business profile during individual application testing and validation of a customer's acquirer Dual Message clearing application.

This profile is applicable to the following products:

- Mastercard®
- Debit Mastercard®
- Maestro®
- Cirrus®
- Global Brand Compliance

NOTE:

The Global Brand Compliance Program is mandated for acquirers outside the U.S. Region to submit On-Us or intraprocessor clearing activity to the Mastercard Processing Center (Central Site).

Separate test cases are provided for magnetic stripe-based operations and for upgrading to integrated circuit card (ICC)-based operations. Depending on the nature of a customer's proposed operations, test cases must be selected as follows:

- For customers undergoing testing and validation for magnetic stripe-based operations only, only those test cases described in the Test Cases—Magnetic Stripe-based Operations section must be conducted.
- For customers undergoing testing and validation for both magnetic stripe-based operations and ICC-based operations, the test cases described in both the Test Cases—Magnetic Stripe-based Operations section and in the Test Cases—ICC-based Operations section must be conducted.
- For customers that have been validated for magnetic stripe-based operations and are now undergoing upgrade testing and validation to additionally conduct ICC-based operations, only those test cases provided in the Test Cases—ICC-based Operations section must be conducted.

Within the Test Cases—Magnetic Stripe-based Operations and the Test Cases—ICC-based Operations sections, test cases are described for both standard operations and contactless operations. Depending on the nature of customers proposed operations, test cases must be selected as follows:

- For customers undergoing testing and validation for contact operations only, only those test cases described for contact operations must be conducted.
- For customers undergoing testing and validation for both contact operations and contactless operations, the test cases described for both contact operations and contactless operations must be conducted.
- For customers that have been validated for contact operations and are now undergoing upgrade testing and validation to additionally conduct contactless operations, only those test cases described for contactless operations must be conducted.

NOTE:

If customers intend to support contactless magnetic stripe-based operations, they must have previously been validated for contact magnetic stripe-based operations. If customers intend to support contactless ICC-based operations, they must previously have been validated for upgrade to contact ICC-based operations.

Within the Test Cases—Magnetic Stripe-based Operations and the Test Cases—ICC-based Operations sections, test cases are described for Global Brand Compliance for both contact operations and contactless operations.

The following manuals in the Testing Reference Information Center (TRIC) document set provide references to these test cases, indicating when they should be conducted:

- Offline Validation
- Online Validation

TRIC Table Notations

This table defines notations that appear in tables throughout this chapter.

TRIC Table Notations

Notation	Definition
M	Indicates a Mandatory business transaction.
C	Indicates a Conditional business transaction.

Notation	Definition
n/a	Indicates Not Applicable.
x	For addenda messages, indicates No Information.
1	Indicates the number of messages to be provided.
0	Indicates the number of messages to be provided.

Test Cases—Magnetic Stripe-based Operations

The test cases listed in this section are applicable to magnetic stripe-based operations only. Select the appropriate business transactions from the following tables and conduct the associated test cases.

Customer-generated File

The following test cases will test whether a customer's acquirer Dual Message clearing application can build and send a valid customer-generated file that contains correctly formatted clearing messages. All business transactions applicable to a customer's business activities are addressed, as are all message types.

Customers must take into account the following points when building a customer-generated file:

- If customers acquire in multiple transaction currencies, the file must contain at least one example of each of those currencies.
- If customers acquire through the use of multiple Customer IDs, the file must contain at least one example of each of those Customer IDs.
- The file must contain examples of messages destined to at least three different issuer Customer IDs.
- While the above points must be taken into account, a customer-generated file must still consist of the same message types and number of messages that are indicated in the test case table.

Base Testing

The test cases in this section are described below.

Table 1410001—Acquirer Credit and Debit—MSR Base—Customer-generated File—All Business Transactions (ATM)

The following test cases will test whether a customer's acquirer Dual Message clearing application can build and send a valid customer-generated file that contains correctly formatted clearing messages for various ATM business transactions and messages types/functions.

Presentment/1240 - First Presentment					
10	141000500004	1	1	C	POS BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE
	Must contain an appropriate DE 26 lodging MCC code for the designated Financial Detail Addendum/1644 message. Whenever the Financial Detail Addendum (Lodging Summary)/1644 message is present, and the transaction involves one of the Mastercard Corporate Cards, the following addendum messages optionally may be provided: 1) Corporate Card Common Data Requirement, usage code 98, industry record number 000; 2) Corporate Card Line Item Detail, usage code 98, industry record number 950. For specific corporate transactions occurring in the United States, Corporate Card Common Data is also required.				
Administrative Request/1644 - Financial Detail Addendum					
11	141000500004	1	1	C	LODGING SUMMARY
	This message provides detailed information about lodging accommodations and related expenses for the cardholder.				
Presentment/1240 - First Presentment					
12	141000500005	1	1	C	POS BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE
	Must contain an appropriate DE 26 temporary services MCC code for the designated Financial Detail Addendum/1644 message. For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.				
Administrative Request/1644 - Financial Detail Addendum					

Test Case	Test Case Ref No	SIM	MTF	M or C	Business Transaction
13	141000500005	1	1	C	TEMPORARY SERVICES
	The Temporary Services detail addendum provides detailed information regarding the billing for services rendered on a temporary or contract basis.				
Presentment/1240 - First Presentment					
14	141000500005	1	1	C	POS BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE
	Must contain an appropriate DE 26 shipping/courier MCC code for the designated Financial Detail Addendum/1644 messages. For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.				
Administrative Request/1644 - Financial Detail Addendum					
15	141000500006	1	1	C	SHIPPING/COURIER SERVICES
	The Shipping/Courier Service detail addendum provides detailed information regarding delivery or courier services.				
Presentment/1240 - First Presentment					
16	141000500007	1	1	C	POS BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE
	Must contain an appropriate DE 26 payment transaction MCC code for the designated Financial Detail Addendum/1644 messages				
Administrative Request/1644 - Financial Detail Addendum					

Test Case	Test Case Ref No	SIM	MTF	M or C	Business Transaction
17	141000500007	1	1	C	PAYMENT TRANSACTION DETAIL
	This message supports data related to a program permitting Mastercard cardholders to receive payments from a money transfer agent or a financial institution.				
Presentment/1240 - First Presentment					
18	141000500008	1	1	C	POS BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE
	Must contain an appropriate DE 26 telecommunication transaction MCC code for the designated Financial Detail Addendum/1644 messages.				
Administrative Request/1644 - Financial Detail Addendum					
19	141000500008	1	1	C	TELEPHONY BILLING (SUMMARY)
	The Telephony Billing Service summary addendum is designed to carry telephony billing data and to enable issuers to supply more transaction information to their consumer and corporate clients. For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.				
20	141000500008	1	1	C	TELEPHONY BILLING (DETAIL)
	The Telephony Billing Service detail addendum is designed to carry telephony billing data and to enable issuers to supply more transaction information to their consumer and corporate clients. For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.				
Presentment/1240 - First Presentment					

Test Case	Test Case Ref No	SIM	MTF	M or C	Business Transaction
21	141000500009	1	1	C	POS BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE
	Must contain an appropriate DE 26 travel agency MCC code for the designated Financial Detail Addendum/1644 messages.				
Administrative Request/1644 - Financial Detail Addendum					
22	141000500009	1	1	C	TRAVEL AGENCY DETAIL
	This message supports corporate transactions for travel agency transactions. For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.				
Presentment/1240 - First Presentment					
23	141000500010	1	1	C	POS BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE
	Must contain an appropriate DE 26 travel MCC code for the designated Financial Detail Addendum/1644 messages. This transaction is conducted with a lodged account which is defined as a corporate card account used by a travel agency for multiple individuals within the same corporate client.				
Administrative Request/1644 - Financial Detail Addendum					
24	141000500010	1	1	C	LODGED ACCOUNT DETAIL
	This message supports Lodged Account transaction information for corporate cardholders. For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.				
Presentment/1240 - First Presentment					

Test Case	Test Case Ref No	SIM	MTF	M or C	Business Transaction
25	141000500011	1	1	C	POS BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE
	Must contain an appropriate DE 26 healthcare MCC code for the designated Financial Detail Addendum/1644 messages.				
Administrative Request/1644 - Financial Detail Addendum					
26	141000500011	1	1	C	HEALTHCARE
	The Financial Detail Addendum (Healthcare) provides a detailed description of the item purchased.				
Presentment/1240 - First Presentment					
27	141000500012	1	1	C	POS BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE
	Must contain an appropriate DE 26 MCC code for the designated Financial Detail Addendum/1644 messages.				
Administrative Request/1644 - Financial Detail Addendum					
28	141000500012	1	1	C	ELECTRONIC INVOICES (TRANSACTION DATA)
	The Electronic Invoice detail addendum messages are designed to carry electronic invoice data that is not present in other addendum messages, and to allow issuers to supply more transaction information to their corporate clients. This message contains detail about the items listed in the invoice.				

Test Case	Test Case Ref No	SIM	MTF	M or C	Business Transaction
29	141000500012	1	1	C	ELECTRONIC INVOICES (PARTY INFORMATION)
	The Electronic Invoice detail addendum messages are designed to carry electronic invoice data that is not present in other addendum messages, and to allow issuers to supply more transaction information to their corporate clients. This message contains information about the buyer, the supplier, the invoice recipient, the payee, the delivery party, and the ship from party.				
Presentment/1240 - First Presentment					
30	141000500013	1	1	C	POS BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE
	Must contain an appropriate DE 26 MCC code for the designated Financial Detail Addendum/1644 messages and conducted with a Mastercard corporate card.				
Administrative Request/1644 - Financial Detail Addendum					
31	141000500013	1	1	C	CORPORATE CARD COMMON DATA REQUIREMENTS
	This addendum is required for specific corporate transactions occurring in the United States and conditionally required for specific interchange programs outside the U.S. region.				
32	141000500013	1	1	C	CORPORATE LINE ITEM DETAIL
	This message supports a single corporate program transaction with multiple line item details.				
Presentment/1240 - First Presentment					

Test Case	Test Case Ref No	SIM	MTF	M or C	Business Transaction
33	141000500014	1	1	C	POS BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE
	Must contain an appropriate DE 26 MCC code for the designated Financial Detail Addendum/1644 messages and conducted with a Mastercard corporate card.				
Administrative Request/1644 - Financial Detail Addendum					
34	141000500014	1	1	C	GENERIC DETAIL
	This message supports data related to new programs and services the Corporation introduces that require the presence of data not available in First Presentment/1240 messages.				

Table 1410008—Acquirer Credit and Debit—MSR Base—Customer-generated File—Service Provider and Merchant Identification

The following test cases will test whether an acquirer Dual Message clearing application is able to submit PDS 0208 (Additional Merchant Data), SF 1 (Payment Facilitator ID), SF 2 (Sub-Merchant ID) and PDS 0209 (Independent Sales Organization ID) to identify that a payment facilitator or an independent sales organization participated in a transaction.

Data Integrity edit requires Submerchant ID must be present when Payment Facilitator ID is present and that DE 43, SF 1 must contain * value in position 4, 8, or 13.

Table 1410009—Acquirer Credit and Debit—MSR Base—Customer-generated File—Global Brand Compliance

The following test cases will test whether a customer's acquirer Dual Message clearing application can build and send a valid customer-generated file containing correctly formatted collection only messages. All business transactions applicable to a customer's business activities are addressed.

NOTE: Test cases for Cash Advance business transactions in the below table apply to Mastercard (MCC) acceptance brand only.

Customers must send the collection only messages in one of the following ways:

- In a separate customer-generated file containing solely collection only messages
- In a customer-generated file along with clearing messages.

File Generated by Mastercard

The following test cases will test whether a customer's acquirer Dual Message clearing application can receive and process valid files generated by Mastercard that contains clearing messages. All business transactions applicable to a customer's business activities are addressed, as are all message types.

The following points will be taken into account when building the files generated by Mastercard for transmission to a customer's host:

- If customers acquire in multiple transaction currencies, the file will contain at least one example of each of those currencies.
- If customers acquire via multiple Customer IDs, a file will be provided for each of those Customer IDs.

- The file will contain examples of messages originating from at least three different issuer Customer IDs.

Customers must confirm that the files generated by Mastercard have been received and successfully processed by their host.

Base Testing

The test cases in this section are described below.

Table 1420001—Acquirer Credit and Debit—MSR Base—File Generated by Mastercard—All Business Transactions

The following test cases will test whether an acquirer Dual Message clearing application can receive and process valid files generated by Mastercard containing clearing messages.

Products and Services

The test cases in this section are described below.

Table 1420826—Acquirer Credit and Debit—MSR Product and Services—File Generated by Mastercard—Merchant Presented QR Payment Transactions

The following test cases will test whether a receiving institution's (OI) Dual Message clearing application can process Merchant Presented QR Payment Presentment transactions.

The following is a listing of the most commonly used DE 18 (Merchant Code) MCC values:

DE 18 (Merchant Code) MCC values

4111	5541	6300	8249	9222
4121	5542	8211	8299	9311
4131	5960	8220	8398	9399
4900	6051	8241	8661	9402
5411	6211	8244	9211	9405

RIIs may test any or all of the above values as well as any other allowed MCC values.

Test Cases—ICC-based Operations

The test cases listed in this section are applicable when upgrading to ICC-based operations and the Global Brand Compliance Program. Select the appropriate business transactions from the following tables and conduct the associated test cases.

NOTE:

The Global Brand Compliance Program is mandated for acquirers outside the U.S. region to submit On-Us or intraprocessor clearing activity to the Mastercard Processing Center (Central Site).

Customer-generated File

The following test cases will test whether a customer's acquirer Dual Message clearing application can build and send a valid customer-generated file that contains correctly formatted clearing messages. All business transactions applicable to a customer's business activities are addressed, as are all message types affected by ICC-based operations.

Base Testing

The test cases in this section are described below.

Table 1430001—Acquirer Credit and Debit—ICC Base—Customer-generated File—All Business Transactions (ATM)

The following test cases will test whether a customer's acquirer Dual Message clearing application can build and send a valid customer-generated file that contains correctly formatted clearing messages for various ATM business transactions and messages types/functions.

File Generated by Mastercard

The following test cases will test whether a customer's acquirer Dual Message clearing application is able to receive and process a valid file generated by Mastercard that contains clearing messages. All business transactions applicable to a customer's business activities are addressed, as are all message types affected by ICC-based operations.

Customers must confirm that the files generated by Mastercard have been received and successfully processed by a customer's host.

Refer to the Products and Services section for Mastercard® PayPass™ operations test cases.

Base Testing

The test cases in this section are described below.

Table 1440001—Acquirer Credit and Debit—ICC Base—File Generated by Mastercard—All Business Transactions

Introduction

This section contains details about the test cases applicable to the Acquirer ATM Credit and Debit business profile during integrated application testing and validation of a customer's Dual Message authorization and clearing applications.

NOTE:

When conducted for the purposes of an integrated testing, these test cases are designed to take two days.

When conducted for customers own testing purposes, no specific time limits apply.

Customers must always conduct the test cases provided for contact magnetic stripe-based operations. If customers support contact integrated circuit card (ICC)-based operations, they must also conduct the test cases provided for contact ICC-based operations. If customers support contactless magnetic stripe-based operations, they must also conduct the test cases provided for contactless magnetic stripe-based operations. If customers support contactless ICC-based operations, they must also conduct the test cases provided for contactless ICC-based operations and for contact ICC-based operations.

The Online Validation manual in the Testing Reference Information Center (TRIC) document set provides references to these test cases, indicating when they should be conducted.

When responding to clearing messages, the Mastercard Test Facility (MTF) responds with one of a repeated sequence of messages. Refer to the Repetition of Test Messages section in Chapter 2 of the Testing and Validation Strategy manual for details.

TRIC Table Notations

This table defines notations that appear in tables throughout this chapter.

TRIC Table Notations

Notation	Definition
M	Indicates a Mandatory business transaction.

Notation	Definition
C	Indicates a Conditional business transaction.
n/a	Indicates Not Applicable.
x	For addenda messages, indicates No Information.
1	Indicates the number of messages to be provided.
0	Indicates the number of messages to be provided.
—	Where it appears in a column in an integrated Dual and Single Message testing table, indicates that customers do not have to send, or will not receive, any messages normally indicated in that column.

Test Cases—Acquirer Credit and Debit

The following test cases will test whether a customer's acquirer applications are able to successfully process the complete transaction life cycle by addressing all messages exchanged during authorization, clearing, and any subsequent exception cycle. The customer's applications must also verify that the data used in any message is compliant with that used in previous messages in the life cycle.

NOTE:

During integrated application testing for purposes of an integrated testing, customers must be capable of supporting all six Global Clearing Management System (GCMS) clearing cycle cut-off times.

These test cases cover all possible business transactions for this business profile. However, customers only need to address the mandatory business transactions (marked as M), together with those conditional business transactions (marked as C) applicable to their proposed business activity.

NOTE:

For business transactions originating from ICC, the transaction amount customers use must be above the floor limit to cause the transaction to go online, as required in the test cases (transaction amounts below the floor limit will be processed offline).

Table 2400001—Acquirer Credit and Debit—Base Testing (ATM)

This table describes the Base test cases for integrated authorization and clearing testing for the acquirer ATM Credit and Debit business profile.

Message Flows—Acquirer Credit and Debit—Mandatory Business Transactions (ATM)

This figure shows the message flows for the mandatory business transactions.

Message Flows—Acquirer Credit and Debit—Mandatory Business Transactions (ATM)

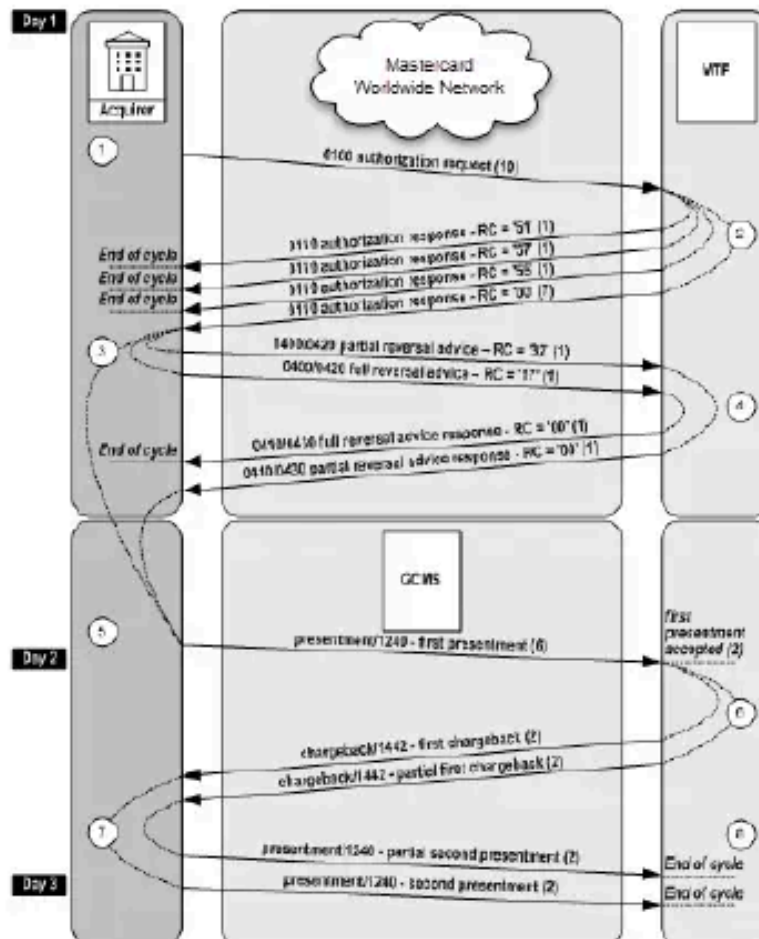

Table 2400002—Acquirer Debit and Credit—Test Procedures—Mandatory Business Transactions (ATM)

This table describes the test procedures for the mandatory business transactions within the Acquirer Credit and Debit business profile.

(2400002)—Acquirer Debit and Credit—Test Procedures—Mandatory Business Transactions (ATM)

Step	Test Case Ref No	Day	Action
1	240000200001	Day 1— morning	For Mastercard MSR ATM online PIN, customers must send ten Authorization Requests: • Four using card numbers that will trigger response code 00 • One using the card number that triggers response code 51 • One using the card number that triggers response code 57 • One using the card number that triggers response code 55 For Debit Mastercard MSR ATM online PIN, customers must send an Authorization Request, using a card number that triggers response code 00. For Maestro MSR ATM online PIN, customers must send an Authorization Request, using a card number that triggers response code 00. For Cirrus MSR ATM online PIN, customers must send an Authorization Request, using a card number that triggers response code 00.
2	240000200002	Day 1— morning	For each correct Authorization Request received, the MTF sends an Authorization Response with the appropriate response code. Customers must check that they receive the correct number of response messages with the expected response codes (as shown in Table 24.1).

Step	Test Case Ref No	Day	Action
3	240000200003	Day 1— morning	Using two of the approved Authorization Request messages, customers must send: • One partial Reversal Advice message containing response code 24 • One full Reversal Advice message containing response code 17
4	240000200004	Day 1— morning	For each correct Reversal Advice, the MTF sends back a Reversal Advice Response message containing response code 00.
5	240000200005	Day 1— before COB	Customers do not need to send a clearing message for the full Reversal Advice. Customers must send a total of six First Presentments, one for each approved transaction: • Customers must send one First Presentment message based on the amount in the partial Reversal Advice message • Customers must send five First Presentments for the remaining approved transactions Customers must verify that Mastercard receives their customer-generated file before close of business.

Step	Test Case Ref No	Day	Action
6	240000200006	Day 2— morning	The MTF checks that the data in each First Presentment corresponds to the data in the related Authorization Request. The MTF responds to each First Presentment message with one of the following messages: • First Presentment accepted (no response) • First Chargeback • Partial First Chargeback All messages will be delivered in the file generated by Mastercard.
7	240000200007	Day 2— before COB	Further to each First Chargeback, customers must send a Second Presentment. Further to each Partial First Chargeback, customers must send a Partial Second Presentment for the appropriate amount. Customers must verify that Mastercard receives their customer-generated file before close of business.
8	240000200008	Day 3	When conducting integrated testing for purposes of an integrated testing, customers must contact their Customer Implementation project manager on Day 3 to confirm that the integrated testing has been completed (for all mandatory and, if appropriate, conditional business transactions).

Table 2400003—Acquirer Credit and Debit—Base Testing (POS CP)

This table lists the test cases applicable to the Acquirer Credit and Debit business profile. Select the appropriate business transactions in the table and follow the message flows described.

Table 2400004—Acquirer Credit and Debit—Mandatory Business Transactions (POS CP)

This table describes the test procedures for the mandatory business transactions within the Acquirer Credit and Debit business profile.

Table 2400004—Acquirer Credit and Debit—Mandatory Business Transactions (POS CP)

Step	Test Case Ref No	Day	Action
1	240000400001	Day 1— morning	For Mastercard MSR purchase signature customers must send nine Authorization Requests: • Four using card numbers that will trigger response code 00 • One using the card number that triggers response code 51 • One using the card number that triggers response code 05 • One using the card number that triggers response code 61 For Mastercard MSR cash advance signature customers must send an Authorization Request using a card number that triggers response code 00. For Debit Mastercard MSR cash advance signature customers must send one Authorization Request using a card number that triggers response code 00.
2	240000400002	Day 1— morning	For each correct Authorization Request received, the Mastercard Test Facility sends an Authorization Response with the appropriate response code. Customers must check that they receive the correct number of response messages with the expected response codes (as shown in Table 25.1).
3	240000400003	Day 1— morning	Using two of the approved authorization messages, customers must send: • One partial Reversal Advice message containing response code 32 • One full Reversal Advice message containing response code 17

Step	Test Case Ref No	Day	Action
4	240000400004	Day 1— morning	For each correct Reversal Advice, the Mastercard Test Facility sends back a Reversal Advice Response message containing response code 00.
5	240000400005	Day 1— before COB	Customers do not need to send a clearing message for the full Reversal Advice. Customers must send a total of eight First Presentments, one for each approved transaction: • Customers must send one First Presentment message based on the amount in the partial Reversal Advice message. • Customers must send two First Presentments for transactions equal to or below the floor limit (i.e. with no prior Authorization Request) Customers must verify that Mastercard receives their customer-generated files before close of business
6	240000400006	Day 2— morning	For each transaction above the floor limit, the Mastercard Test Facility checks that the data in each First Presentment corresponds to the data in the related Authorization Request. The MTF responds to each First Presentment message with one of the following messages: • First Presentment accepted (no response) • Retrieval Request • First Chargeback • Partial First Chargeback All messages will be delivered in the file generated by Mastercard.

Step	Test Case Ref No	Day	Action
7	240000400007	Day 2— before COB	Customer do not have to respond to the Retrieval Request messages. For each First Chargeback, customers must send a Second Presentment. For each Partial First Chargeback, customers must send a Partial Second Presentment for the appropriate amount. Customers must verify that Mastercard receives their Customer-generated file before close of business.
8	240000400008	Day 3	For each Second Presentment received, the Mastercard Test Facility sends one Arbitration Chargeback. For each Partial Second Presentment received, the Mastercard Test Facility sends one Partial Arbitration Chargeback. All messages will be delivered in the file generated by Mastercard.
9	240000400009	Day 3— before COB	When conducting integrated testing for purposes of an integrated testing, customers must contact their Customer Implementation project manager on Day 3 to confirm that the integrated testing has been completed (for all mandatory, and if appropriate, conditional business transactions).

Table 2400005—Acquirer Credit and Debit—Base Testing (POS CNP)

This table lists the test cases applicable to the Acquirer Credit and Debit business profile. Select the appropriate business transactions in the table and follow the message flows described.

Table 2400006— Acquirer Credit and Debit—Mandatory Business Transactions (POS CNP)

The table below describes the test procedures for the mandatory business transactions within the Acquirer Credit and Debit business profile.

Table 2400006— Acquirer Credit and Debit—Mandatory Business Transactions (POS CNP)

Step	Test Case Ref No	Day	Action
1	240000600001	Day 1— morning	For Mastercard manual purchase signature, customers must send 12 Authorization Requests: • Three using card numbers that will trigger response code 00 • One using the card number that triggers response code 51 • One using the card number that triggers response code 05 • One using the card number that triggers response code 61 For Debit Mastercard manual purchase signature, customers must send one Authorization Request using a card number that triggers response code 00. For Mastercard manual cash advance signature, customers must send one Authorization Request using a card number that triggers response code 00. For Debit Mastercard manual cash advance signature, customers must send one Authorization Request using a card number that triggers response code 00. For Mastercard MOTO purchase no CVM, customers must send one Authorization Request using a card number that triggers response code 00. For Debit Mastercard MOTO purchase no CVM, customers must send one Authorization Request using a card number that triggers response code 00. For Mastercard electronic commerce purchase no CVM or for Debit Mastercard electronic commerce purchase no CVM or for Maestro electronic commerce purchase no CVM, customers must send one Authorization Request using a card number that triggers response code 00.

Step	Test Case Ref No	Day	Action
2	240000600002	Day 1— morning	For each correct Authorization Request received, the MTF sends an Authorization Response with the appropriate response code. Customers must check that they receive the correct number of response messages with the expected response codes.
3	240000600003	Day 1— morning	Using two of the approved authorization messages, customers must send: • One partial Reversal Advice message containing response code 32 • One full Reversal Advice message containing response code 17
4	240000600004	Day 1— morning	For each correct Reversal Advice, the MTF sends back a Reversal Advice Response message containing response code 00.
5	240000600005	Day 1— before COB	Customers do not need to send a clearing message for the full Reversal Advice. Customers must send a total of nine First Presentments, one for each approved transaction: • Customers must send one First Presentment message based on the amount in the partial Reversal Advice message • Customers must send six First Presentments for the remaining approved transactions • Customers must send two First Presentments for transactions equal to or below the floor limit (for example, with no prior Authorization Request) Customers must verify that Mastercard receives their customer-generated file before close of business.

Step	Test Case Ref No	Day	Action
6	240000600006	Day 2— morning	For each transaction above the floor limit, the MTF checks that the data in each First Presentment corresponds to the data in the related Authorization Request. The MTF responds to each First Presentment message with one of the following messages: • First Presentment accepted (no response) • Retrieval Request • First Chargeback • Partial First Chargeback All messages will be delivered in the file generated by Mastercard.
7	240000600007	Day 2— before COB	Customers do not have to respond to the Retrieval Request messages. Further to each First Chargeback, customers must send a Second Presentment. Further to each Partial First Chargeback, customers must send a Partial Second Presentment for the appropriate amount. Customers must verify that Mastercard receives their member-generated file before close of business.
8	240000600008	Day 3	For each Second Presentment received, the MTF sends one Arbitration Chargeback. For each Partial Second Presentment received, the MTF sends one Partial Arbitration Chargeback. All messages will be delivered in the file generated by Mastercard.

Step	Test Case Ref No	Day	Action
9	240000600009	Day 3— before COB	When conducting integrated testing for purposes of an integrated testing, customers must contact their Customer Implementation project manager on Day 3 to confirm that the integrated testing has been completed (for all mandatory and, if appropriate, conditional business transactions).

Chapter 4 Single Message Authorization

This chapter describes the test cases for conducting individual application testing and validation of a customer's Single Message authorization application.

Introduction

This section contains details about the test cases applicable to the Acquirer ATM Credit and Debit business profile during base application testing and validation of a customer's acquirer Single Message authorization application.

The following test cases test whether basic message exchanges can be performed between the customer host and the Mastercard test simulator/online test environment. This will include store and forward, working key exchanges, manual adjustments, settlement, and late Financial Transaction Request Response/0210 messages and next business day transactions.

Manual adjustments are debit or credit adjustments that can be sent to an issuer or acquirer for any previous day transactions.

The Mastercard Single Message System will expect all customers to test accurate to all applicable scenarios in the test script.

TRIC Table Notations

This table defines notations that appear in tables throughout this chapter.

TRIC Table Notations

Notation	Definition
M	Indicates a Mandatory business transaction.
C	Indicates a Conditional business transaction.
V	Where it appears in a DE 52 column in an Authorization table, indicates a Valid PIN value. Where it appears in an RC column in an Authorization table, indicates any valid response or any specified response provided.
IV	Where it appears in a DE 52 column in an Authorization table, indicates an Invalid PIN value.
␣	Indicates a blank space when used in DE 48, subelement 71 fourth position.

Notation	Definition
n/a	Indicates Not Applicable.
x	For addenda messages, indicates No Information.
* (Single asterisk)	Where it appears in a DE column in a Dual Message or Single Message Authorization table, indicates a 1 character field of customer choice.
** (Double asterisk)	Where it appears in a DE column of a Dual Message or Single Message Authorization table, indicates a 2 character field of customer choice.
1	Where it appears in a SIM or MTF column of a Dual Message or Single Message Authorization table, indicates testing is recommended for that environment.
0	Where it appears in a SIM or MTF column of a Dual Message or Single Message Authorization table, indicates testing is available for that environment.
—	Where it appears in a column in an integrated Dual and Single Message testing table, indicates that customers do not have to send, or will not receive, any messages normally indicated in that column.

Test Cases—Magnetic Stripe-based Operations

The test cases listed in this section are applicable to magnetic stripe-based operations only. Both contact magnetic stripe-based operations and contactless magnetic stripe-based operations are addressed. Select the appropriate business transactions from the following tables and conduct the associated test cases.

Base Testing

The following test cases will test whether a customer's acquirer Single Message application can send correctly formatted Financial Transaction Requests, Advices, and Reversal Advices, and process the resulting Responses when presented with the required basic functionalities.

NOTE:

Acquirers may optionally submit ATM transactions with online PIN as CAT level 1 or CAT level 0.

Table 3000001—Acquirer Credit and Debit—MSR Base—All Business Transactions (ATM)—Financial Transaction Requests and Reversals

The following test cases will test whether an acquirer's Single Message online application can send correctly formatted Financial Transaction Requests and Reversals for different ATM business transactions containing various combinations of PAN entry mode, transaction type, cardholder activated terminal level, and cardholder verification method and process the resulting approved Financial Transaction Responses.

NOTE: These business transactions may be repeated as needed to accomplish multiple days testing which may include applicable Network Management 08xx messages.

Table 3000011—Acquirer Credit and Debit—MSR Base—Service Provider and Merchant Identification—Financial Transaction Requests

The following test cases will test whether an acquirer's Single Message online application can send DE 43 with the correctly formatted name in subfield 1 (ATM Owner Name and/or Address, or POS Merchant Name [or Payment Facilitator and Sub-Merchant Information, if applicable]), and Payment Facilitator, Independent Sales Organization and Sub-merchant IDs in DE 48 subelement 37 when a Payment Facilitator or Independent Sales Organization participates in a transaction and provide the appropriate responses.

NOTE: DE 43, subfields 3 and 5 and DE 61, subfields 13 and 14 must contain the location information of the sub-merchant, not the payment facilitator.

Data Integrity edit requires Sub-merchant ID must be present when Payment Facilitator ID is present and that DE 43, SF 1 must contain * value in position 4, 8, or 13.

Table 3000016—Acquirer Credit and Debit—MSR Base—Payment Account Reference (PAR)—Financial Transaction Requests, Advices, Reversals

The following test cases will test whether an acquirer's Single Message online application can receive PAR in DE 56 of Financial Transaction Request Response, Advice Response, Acquirer Reversal Advice Response, and Issuer Reversal Advice messages.

PAR may be provided for issuers participating in Mastercard Digital Enablement Service (MDES) for token and PAN transactions as well as for non-MDES issuers who have obtained PAR from Mastercard via the Payment Account Management API when Mastercard is the BIN Controller.

Programs and Services Testing

This section contains test cases for different Programs and Services offered by the Mastercard Single Message System as optional services. These services are available only to customers that connect directly to the System.

For details about these Programs and Services, refer to the Single Message System Programs and Services manual located on Mastercard Connect™.

Table 3000101—Acquirer Credit and Debit—MSR Product and Services—Private Data—Financial Transaction Requests

The following test cases will test whether an acquirer's Dual Message authorization application can send correctly formatted Financial Transaction Requests with Private Data and process the resulting Financial Transaction Responses with Private Data.

NOTE: Acquirers may also submit 0220 advice and 0420 reversal messages containing same scenarios as 0200 messages.

Table 3000101—Acquirer Credit and Debit—MSR Product and Services—Private Data—Financial Transaction Requests

Table 3000512—Acquirer Credit and Debit—MSR Product and Services—Unique Identification Service (India)—Financial Transaction Requests

The following test cases will test whether an acquirer's Single Message application can send Unique Identification for India information in Financial Transaction Requests and process the resulting Financial Transaction Request Responses from the Issuer.

The following data elements and values uniquely identify India Unique Identification transactions:

- DE 22, subfield 1 = 01 or 90 (Manual Entry or PAN auto-entry via magnetic stripe)
- DE 52 (PIN) = may be present or may be absent. This is unique to the Unique Identification Service Transactions for India.
- DE 105 = Enhanced Identification Data
- DE 106 = Private Data
- DE 107 = India On-Soil data

DE 105 in the /0210 response will include Subelement 5 (Transaction Identifier), subelement 12 (Product Code) = UID, subelement 13 (Return Value) = Value for the disposition of the Biometric validation Y=Valid, N= Not valid, and optionally subelements 14 (Authenticator Code), 15 (Time Stamp), 16 (Meta Data) and 17 (Error Code) = error code when Subelement 13 = N.

NOTE: Acquiring device will be POS terminal or micro-ATM which has both Mag Stripe and/or manual entry.

Table 3000601—Acquirer Credit and Debit—MSR Product and Services—Contactless Magnetic Stripe (All Business Transactions)—Financial Transaction Requests

The tests in this table and table 3000602 will test whether an acquirer's Single Message financial application can send correctly formatted Financial Transaction Requests for various contactless magnetic stripe business transactions and process the resulting Financial Transaction Responses.

NOTE: For all tests in this table, DE 61, SF 11 (POS Card Data Terminal Input Capability Indicator) must contain the following information, based on the acquirer's terminal capabilities:

- For terminals supporting both contactless M/Chip and contactless Magnetic Stripe transactions: 3 (Contactless M/Chip [Proximity Chip])
- For terminals supporting only contactless Magnetic Stripe transactions: 4 (Contactless Magnetic Stripe [Proximity Chip] only)

NOTE: The tests in this table and table 3101001 are for specific implementations in the United States where Maestro Transactions are initiated using Debit Mastercard cards. These tables must be initiated using cards from the NIV Test Tools Subset 6 which currently only supplies MCC cards.

Table 3000602—Acquirer Credit and Debit—MSR Product and Services—Contactless Magnetic Stripe (Technical Conditions)—Financial Transaction Requests and Reversal

These cases test whether the terminals customer deploy can correctly process contactless magnetic stripe cards which have specific values set in the data contained on the cards.

NOTE: The terminal being tested must have previously been approved (hardware/software/firmware) by Mastercard. For all tests in this table, DE 61, SF 11 (POS Card Data Terminal Input Capability Indicator) must contain the following information, based on the acquirer's terminal capabilities:

- For terminals supporting both contactless M/Chip and contactless Magnetic Stripe transactions: 3 (Contactless M/Chip [Proximity Chip])
- For terminals supporting only contactless Magnetic Stripe transactions: 4 (Contactless Magnetic Stripe [Proximity Chip] only)

NOTE: The tests in this table are for implementations in the United States where Maestro transactions are initiated using Debit Mastercard cards. These tests must be initiated using cards from the NIV Test Tools Subset 6. Customers should use the indicated MCC card in the existing set to initiate transactions. These tests are primarily designed to complete the Terminal Integration Process (TIP) to ensure that the contactless magnetic stripe terminal conforms to Mastercard requirements. Since no separate TIP task exists for contactless magnetic stripe, TIP is executed as part of NIV using this table.

NOTE: The CVM Limit values referenced in the test table can be found in Appendix C of the Chargeback Guide, under the product name Contactless. The Contactless Transaction Limit values referenced in the test table can be found in Chapter 4 of the M/Chip Requirements for Contact and Contactless.

PAN Mapping File Information (DE 48, SE 33) included in 0110 and in 0410. This test case must not be executed by Contactless M/Chip acquirers.									

Table 3000625—Acquirer Credit and Debit—MSR Product and Services—Automated Fuel Dispenser—Financial Transaction Requests, Reversals and Advices

The following test cases will test whether an acquirer's Single Message authorization application can send correctly formatted pre-authorization Financial Transaction Requests and related Financial Transaction Advice message for Automated Fuel Dispenser transactions.

First, customers must send the correctly formatted pre-authorization Financial Transaction Request on which the Financial Transaction Advice is based.

Second, customers must send correctly formatted Financial Transaction Advice for the completed amount of the transaction.

Table 3000824—Acquirer Credit and Debit—MSR Product and Services—Mobile Remote Payments Program—Financial Transaction Requests and Reversals

Test cases 1-8 will test whether an acquirer's Single Message application that is participating in the optional Mobile Remote Payments Program can send correctly formatted Financial Transaction Requests containing DE 22, Subfield 1 = 82 (PAN Auto Entry via Server), DE 48, Subelement 48, Subfield 1 = 1 (Issuer Domain), Subfield 2, and applicable Subfields 3 and/or 4, and process the resulting Financial Responses.

Test cases 9-10 will test whether an acquirer Single Message application can send the optional DE 22, Subfield 1 = 82 for transactions that are not part of the optional Mobile Remote Payments Program.

Test cases 11-16 will test whether an acquirer Single Message application that is participating in the optional Mobile Remote Payments Program can send correctly formatted Financial Transaction Requests containing DE 22, Subfield 1 = 82 (PAN Auto Entry via Server), DE 48, Subelement 48, Subfield 1 = 2 (Acquirer Domain), Subfield 2, and applicable Subfields 3 and/or 4, and process the resulting Financial Responses.

NOTE: Acquirers must submit DE 48, SE 23 (Payment Initiation Channel) if acquired in specific geographic areas.

Test Cases—ICC-based Operations

The test cases listed in this section are applicable when upgrading to integrated circuit card (ICC)-based operations. In this section, both contact ICC-based operations and ICC-based PIN Management operations are addressed. Select the appropriate business transactions from the following tables and conduct the associated test cases.

NOTE:

The transaction amounts customers use must be above the floor limit to cause the transaction to go online, as required in the test cases (transaction amounts below the floor limit will be processed offline).

Base Testing

The test cases in the Single Message Financial and Exception integrated circuit card (ICC) section are described below.

NOTE:

Acquirers may optionally submit ATM transactions with online PIN as CAT level 1 or CAT level 0.

Table 3050001—Acquirer Credit and Debit—ICC Base—All Business Transactions (ATM)—Financial Transaction Requests

The following test cases will test whether an acquirer's Single Message application can send correctly formatted Financial Requests, and process the resulting Financial Responses.

The tests in this table require that the tester use test cards in the NIV Test Tools Subset 3. For information about obtaining Subset 3, please see M/Chip Qualified Test Tools (link to that document, http://my.mastercard.com/gto/service_mgmt/cust_service_mgmt/Manuals_MP/ENG/MCQ/MCQ_Manual.pdf).

Authorization M/Chip-specific General Acceptance Criteria

Unless otherwise specified in the comments field of each test case, these conditions must be fulfilled with all M/Chip 0200 Financial Transaction Request messages.

- DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code) must be 01 for Withdrawal.
- DE 14 (Date, Expiration) must be present.
- DE 18 (Merchant Type) must be 6011 for ATM or 6010 for Purchase.
- DE 22 (POS Entry Mode), subfield 1 (POS Terminal PAN Entry Mode) must be 05 (PAN auto-entry via M/Chip).
- DE 22 (POS Entry Mode), subfield 2 (POS Terminal PIN Entry Mode) must be 1 (Terminal has PIN entry capability).

- DE 23 (Card Sequence Number) must be 000, except when cards 111 or 112 are used.
- DE 52 (PIN Data) must be present.
- DE 55 (ICC System-Related data) and DE 23 (Card Sequence Number) must be present, except when card 118 is used.
- When DE 55 (ICC System-Related Data) is present, the Authorization Request Cryptogram (ARQC) must be successfully validated by the simulator.
- When DE 55 is present, all mandatory tags, including tag 9F34 (CVM Results), must be present.
- When DE 55 is present, only mandatory and optional tags must be included in DE 55.
- DE 61 (POS Data), subfield 4 (POS Cardholder Presence) must be 0 (Cardholder present).
- DE 61 (POS Data), subfield 11 (POS Card Data Terminal Input Capability Indicator) must be 5 (Magnetic stripe reader and EMV specification compatible integrated circuit card (ICC) reader), 8 (Magnetic stripe reader and key entry and EMV-compatible ICC reader) or 9 (EMV compatible ICC reader only). Acquirers whose terminals support contactless M/Chip transactions may use a value of 3 (Contactless M/Chip [Proximity Chip]).

For acquirers supporting ATM Surcharge, the following conditions must be fulfilled with all M/Chip 0200 Financial Transaction Request:

- DE 28 (Amount, Transaction Fee) must be present.
- DE 4 (Amount, Transaction) must contain the total amount (the original requested amount plus the transaction fee).
- DE 55 (ICC System-related data) Tag 9F02 (Amount Authorized) must contain the original requested amount, usually excluding the transaction fee.

NOTE:

The value contained in DE 55 (ICC System-related data) Tag 9F02 (Amount Authorized) is used during cryptogram generation, therefore it is forbidden to update this Tag after the cryptogram generation. Having Tag 9F02 out of sync with DE 4 (Amount, Transaction) is permitted in some particular cases like ATM Surcharge.

Programs and Services Testing

This section contains test cases for different Programs and Services offered by the Single Message System as optional services.

These services are available only to customers that connect directly to the System. For detail about these Programs and Services please refer to the Single Message System Programs and Services Manual located on Mastercard Connect™.

Table 3050150—Acquirer Credit and Debit—ICC Product and Services—Contactless M/Chip (All Business Transactions)—Financial Transaction Requests and Reversal

The following test cases will test whether an acquirer's Single Message application can send correctly formatted Financial Transaction Requests and Reversal for various contactless M/Chip business transactions and process the resulting Financial Transaction Responses.

The tests in this table require that the tester use test cards in the NIV Test Tools Subset 7. For information about obtaining Subset 7, please see M/Chip Qualified Test Tools (link to that document, http://my.mastercard.com/gto/service_mgmt/cust_service_mgmt/Manuals_MP/ENG/MCQ/MCQ_Manual.pdf).

Table 3050152—Acquirer Credit and Debit—ICC Product and Services—Contactless M/Chip (Technical Conditions)—Financial Transaction Requests

The following test cases will test whether an acquirer's Single Message application can produce Financial Transaction Requests and process correctly formatted Financial Transaction Responses under the less common, but valid, general conditions surrounding the financial system.

These test cases must be executed by all Acquirers using a Business Transaction that they support. The Acquirer may choose any business transaction that they support to execute these test cases. Therefore, Data Element fields marked with an asterisk (*) should be the correct ones for the transaction that the customer chooses to run for the test.

The tests in this table require that the tester use test cards in the NIV Test Tools Subset 7. For information about obtaining Subset 7, please see M/Chip Qualified Test Tools (link to that document, http://my.mastercard.com/gto/service_mgmt/cust_service_mgmt/Manuals_MP/ENG/MCQ/MCQ_Manual.pdf).

Table 3050152—Acquirer Credit and Debit—ICC Product and Services—Contactless M/Chip (Technical Conditions)—Financial Transaction Requests

Financial transaction meets the contactless M/Chip-specific acceptance criteria.											
NOTE: Acquirers should execute this test case twice; once using card MSI_411 and again using card MSI_412.											

Case ID	MTI	Test Case Ref No	SIM	MTF	Business Transaction	DE 3_1	DE 22_1	DE 61_10	DE 52	Card Id	RC
2	0200	315010200002	1	N/A	ICC CONTACTLESS ATM OR POS CP BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE	**	07	*	*	MSI_415 CIR_415	00
		Financial transaction meets the contactless M/Chip-specific acceptance criteria. Unlike other ICC contactless tests, authorization response includes DE 55 (ICC System Related Data), which is not processed by the terminal or card and should not affect transaction outcome.									
3	0200	315010200003	1	N/A	ICC CONTACTLESS ATM OR POS CP BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE	**	07	*	*	MSI_406	00
		Financial transaction meets the contactless M/Chip-specific acceptance criteria. This test case should be executed by Acquirers when merchants provide the Device Type. DE 48, SE 23, SF 1 = 00 (Card)									
4	0200	315010200004	1	N/A	ICC CONTACTLESS ATM OR POS CP BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE	**	07	*	*	MSI_420	00
		Financial transaction meets the contactless M/Chip-specific acceptance criteria. This test case should be executed by Acquirers when merchants provide the Device Type. DE 48, SE 23, SF 1 = 01 (Mobile Phone or Smartphone).									

Case ID	MTI	Test Case Ref No	SIM	MTF	Business Transaction	DE 3_1	DE 22_1	DE 61_10	DE 52	Card Id	RC
5	0200	305015200011	1	N/A	ICC CONTACTLESS ATM WITHDRAWAL ONLINE PIN	01	07	1	V	MSI_406 CIR_406	00
		Financial Transaction Request meets the contactless M/Chip-specific general acceptance criteria. This is the first of two ATM service requests initiated by a single contactless tap wherein the cryptographic data will be the same for both requests when Transaction Type (DE 55 tag 9C) is equal to '93' (contactless)									
6	0200	305015200012	1	N/A	ICC CONTACTLESS ATM WITHDRAWAL ONLINE PIN	01	07	1	V	MSI_406 CIR_406	00
		Financial Transaction Request meets the contactless M/Chip-specific general acceptance criteria. This is the second of two ATM service requests initiated by a single contactless tap wherein the cryptographic data will be the same for both requests. Transaction Type (DE 55 tag 9C) is equal to '01' (withdrawal)									
7	0200	315010200021	1	N/A	ICC CONTACTLESS ATM OR POS CP BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE	**	07	*	*	MCC_420 MSI_420	00
		Financial transaction meets the contactless M/Chip-specific acceptance criteria. Mastercard Digital Enablement Service issuer token transaction was successfully mapped and validated. 0200: Acquirer must send DE 4 = 000000005633 to obtain appropriate data in response message. 0210: DE 48, SE 33, SF 1 = M (Primary Account Number), SF 2 (PAN), SF 3 (PAN expiry date), SF 5 (Token Assurance Level), and SF 6 (Token Requestor ID). 0210: DE 56 (Payment Account Data) is provided either by Mastercard as BIN Controller or optionally by Issuer as BIN Controller.									

Case ID	MTI	Test Case Ref No	SIM	MTF	Business Transaction	DE 3_1	DE 22_1	DE 61_10	DE 52	Card Id	RC
8	0200	315010200022	1	N/A	ICC CONTACTLESS ATM OR POS CP BUSINESS TRANSACTION AND CVM OF CUSTOMER CHOICE	**	07	*	*	MSI_411-412 CIR_411-412	00
Financial transaction meets the contactless M/Chip-specific acceptance criteria. NOTE: Acquirers should execute this test case twice; once using card MSI_411 and again using card MSI_412.											

Table 3050311—Acquirer Credit and Debit—ICC Product and Services—PIN Management Service—Financial Transaction Requests

The following test cases are designed to ensure the acquirer application sends PIN Management Financial Transaction Requests, and can process the Financial Responses.

The tests in this table require that the tester use test cards in the NIV Test Tools Subset 5. For information about obtaining Subset 5, please see M/Chip Qualified Test Tools (link to that document, http://my.mastercard.com/gto/service_mgmt/cust_service_mgmt/Manuals_MP/ENG/MCQ/MCQ_Manual.pdf).

NOTE: The response codes tested do not represent the full range possible.

Table 3050311—Acquirer Credit and Debit—ICC Product and Services—PIN Management Service—Financial Transaction Requests

Case ID	MTI	Test Case Ref No	SIM	MTF	Business Transaction	DE 3_1	DE 22_1	DE 61_10	DE 52	Card Id	RC

Table 3050638—Acquirer Credit and Debit—ICC Product and Services—Automated Fuel Dispenser—Financial Transaction Requests, Reversals and Advices

The following test cases will test whether an acquirer's Single Message authorization application can send correctly formatted pre-authorization Financial Transaction Requests and related Financial Transaction Advice message for Automated Fuel Dispenser transactions.

First, customers must send the correctly formatted pre-authorization Financial Transaction Request on which the Financial Transaction Advice is based.

Second, customers must send correctly formatted Financial Transaction Advice for the completed amount of the transaction.

Table 3050660—Acquirer Credit and Debit—ICC Product and Services—Mastercard Biometric Card Authentication—Financial Transaction Requests and Advices

The following test cases will test whether an acquirer's Single Message online application can send correctly formatted Account Status Inquiry (ASI) and Purchase or Purchase with Cash Back Financial Transaction Requests and Advices for issuers participating in Mastercard Biometric Card Authentication, and process the resulting Financial Transaction Responses containing when applicable DE 48, subelement 17 indicating successful biometric authentication.

These test cases for contact chip may also be executed as contactless M/Chip. These test cases for Purchase may also be executed as Purchase with Cash Back.
